# LaCie Hard Drive SATA

High-bandwidth storage with Serial ATA interface

## REVOLUTIONARY SATA INTERFACE

The LaCie d2 Hard Drive is now available with the technology of the future — Serial ATA (SATA). This new, high-performance interface is capable of reaching transfer speeds of up to 150MB/s, making it a smart choice for applications requiring high-speed data transfer. The LaCie d2 SATA Hard Drives also feature rotational speeds up to 10,000 rpm (74GB drive) and an 8MB cache buffer size, which make it one of the fastest, most advanced storage solutions available for digital video professionals.

## PERFECT FOR VIDEO/RAID

Because of the increased bandwidth the SATA interface provides, the d2 SATA Hard Drive is well suited for a variety of applications, including large-scale backup, video editing, RAID 0 and RAID 1 projects. LaCie d2 SATA Hard Drives can transfer data at rates of up to 85MB/s, making them ideal for those who work with professional-quality video in high-end workstation, small server and network environments.

## UNIQUE 2in1 SATA AND POWER PCI CARD INCLUDED

LaCie's SATA Card includes 2 SATA ports and 2 power ports to eliminate the use of an AC adapter. In addition to being hot pluggable*, the LaCie d2 SATA Hard Drive can also operate as a boot-up disk** using Windows or Mac OS. The LaCie d2 SATA Hard Drive ships with a LaCie SATA PCI Card for upgrading your system to include SATA connectivity.

## VERSATILE DESIGN

Constructed from a sturdy metal alloy, this drive's aluminum design works to draw heat away from the drive, keeping it "cool" during operation. The LaCie d2 SATA Hard Drive is slender and stylish, and offers versatile desktop and rackmount configuration options. A space-saving drive stand allows for upright desktop use, while an optional rack-mounting kit enables configuration in standard 19-inch racks.

*hot-plug capability is available for Mac OS 10.3.x and higher, and for Windows XP SP1 and higher

*A gigabyte means 1 billion bytes. Total accessible capacity varies depending upon operating environment.
**To take advantage of the bootable feature, the LaCie d2 SATA Hard Drive must be formatted as a bootable drive in accordance with the operating system being used. The computer must also include a BIOS or a SATA PCI card,such as the LaCie SATA PCI Card, that supports bootable functionality with an external hard drive.
